**Ansys Workbench is a workflow analysis platform, combining the strength of our core simulation tools with the tools necessary to manage your projects. Analysis systems or blocks can be linked together in a flow-chart like manner. These links can be used to manage the flow of data between analysis systems such as geometry, mesh or results. Each System or block can be opened up to access the underlying application. This could be something like Mechanical, Fluent or SpaceClaim or simply just a control to manage imported external data.**
