1. Using 32-bit Workbench and 64-bit solver.

2. The ANSYS product for Sun Solaris is bundled with a 64-bit version that will run on all UltraSPARC processors and an additional 64-bit version that has been architected for improved performance on UltraSPARC III and IV.

3. There is a known issue when running Workbench on Solaris 10 with Xsun security patch ID 119059-25 and above. We have released a patch to fix this issue. This patch can be downloaded from the ANSYS customer portal.

4. ANSYS TurboGrid 11.0 is not supported on this platform.

5. ANSYS CFX Products and on Vista are supported at a beta level only. ANSYS CFX Products include the CFX Solver as well as CFX-Pre, CFX-Post, BladeModeler, CFX-Mesh, and TurboGrid.
